Environmental Science and Sustainability ? Quick Revision & Formula Sheet

Subject Code: ES107 Semester: 2

.....
Last-day revision guide with key definitions, formulas and diagrams checklist.

Unit 1: Ecosystems and Biodiversity

- Definition, key concepts and significance of Ecosystems and Biodiversity
- Important diagrams / derivations / algorithms for Ecosystems and Biodiversity
- Solved examples and previous-year questions on Ecosystems and Biodiversity

Unit 2: Natural Resources

- Definition, key concepts and significance of Natural Resources
- Important diagrams / derivations / algorithms for Natural Resources
- Solved examples and previous-year questions on Natural Resources

Unit 3: Environmental Pollution

- Definition, key concepts and significance of Environmental Pollution
- Important diagrams / derivations / algorithms for Environmental Pollution
- Solved examples and previous-year questions on Environmental Pollution

Unit 4: Climate Change

- Definition, key concepts and significance of Climate Change
- Important diagrams / derivations / algorithms for Climate Change
- Solved examples and previous-year questions on Climate Change

Unit 5: Sustainability and Green Engineering

- Definition, key concepts and significance of Sustainability and Green Engineering
- Important diagrams / derivations / algorithms for Sustainability and Green

Engineering

- Solved examples and previous-year questions on Sustainability and Green Engineering

Exam Tips:

* Start with the latest syllabus and exam pattern ? focus on units with the highest weightage first.

* Solve at least 3 previous year papers under timed conditions before the exam.

* Focus on frequently repeated topics ? they are strong preparation priorities based on available papers (not guarantees).

* Revise definitions, diagrams and standard derivations ? they earn easy marks.

* Practise numerical problems from every unit; papers usually include 2?3 compulsory problems.
