

BACKLOG BUDDY ? STUDY MATERIAL

Engineering Mathematics-II ? Syllabus & Reference Books

Subject Code: MA201 Semester: 2

.....
Unit-wise syllabus, recommended reference books and question paper pattern.

Unit 1: Laplace Transforms

- Definition, key concepts and significance of Laplace Transforms
- Important diagrams / derivations / algorithms for Laplace Transforms
- Solved examples and previous-year questions on Laplace Transforms

Unit 2: Fourier Series

- Definition, key concepts and significance of Fourier Series
- Important diagrams / derivations / algorithms for Fourier Series
- Solved examples and previous-year questions on Fourier Series

Unit 3: Vector Integration

- Definition, key concepts and significance of Vector Integration
- Important diagrams / derivations / algorithms for Vector Integration
- Solved examples and previous-year questions on Vector Integration

Unit 4: Complex Variables

- Definition, key concepts and significance of Complex Variables
- Important diagrams / derivations / algorithms for Complex Variables
- Solved examples and previous-year questions on Complex Variables

Unit 5: Numerical Methods

- Definition, key concepts and significance of Numerical Methods
- Important diagrams / derivations / algorithms for Numerical Methods
- Solved examples and previous-year questions on Numerical Methods

Exam Tips:

- * Start with the latest syllabus and exam pattern ? focus on units with the highest weightage first.
- * Solve at least 3 previous year papers under timed conditions before the exam.
- * Focus on frequently repeated topics ? they are strong preparation priorities based on available papers (not guarantees).
- * Revise definitions, diagrams and standard derivations ? they earn easy marks.
- * Practise numerical problems from every unit; papers usually include 2?3 compulsory problems.

Disclaimer: Sample study material for preparation support only.

Appearance counts are based on available papers and are not exam predictions.
