

BACKLOG BUDDY ? STUDY MATERIAL

Strength of Materials ? Syllabus & Reference Books

Subject Code: ME302 Semester: 3

.....
Unit-wise syllabus, recommended reference books and question paper pattern.

Unit 1: Stress and Strain

- Definition, key concepts and significance of Stress and Strain
- Important diagrams / derivations / algorithms for Stress and Strain
- Solved examples and previous-year questions on Stress and Strain

Unit 2: Shear Force and Bending Moment Diagrams

- Definition, key concepts and significance of Shear Force and Bending Moment Diagrams
- Important diagrams / derivations / algorithms for Shear Force and Bending Moment Diagrams
- Solved examples and previous-year questions on Shear Force and Bending Moment Diagrams

Unit 3: Bending and Shear Stresses

- Definition, key concepts and significance of Bending and Shear Stresses
- Important diagrams / derivations / algorithms for Bending and Shear Stresses
- Solved examples and previous-year questions on Bending and Shear Stresses

Unit 4: Torsion of Shafts

- Definition, key concepts and significance of Torsion of Shafts
- Important diagrams / derivations / algorithms for Torsion of Shafts
- Solved examples and previous-year questions on Torsion of Shafts

Unit 5: Columns and Struts

- Definition, key concepts and significance of Columns and Struts
- Important diagrams / derivations / algorithms for Columns and Struts
- Solved examples and previous-year questions on Columns and Struts

Exam Tips:

- * Start with the latest syllabus and exam pattern ? focus on units with the highest weightage first.
- * Solve at least 3 previous year papers under timed conditions before the exam.
- * Focus on frequently repeated topics ? they are strong preparation priorities based on available papers (not guarantees).
- * Revise definitions, diagrams and standard derivations ? they earn easy marks.
- * Practise numerical problems from every unit; papers usually include 2-3 compulsory problems.
