

BACKLOG BUDDY ? STUDY MATERIAL

Machine Design ? Quick Revision & Formula Sheet

Subject Code: ME501 Semester: 5

.....
Last-day revision guide with key definitions, formulas and diagrams checklist.

Unit 1: Design for Static Loading

- Definition, key concepts and significance of Design for Static Loading
- Important diagrams / derivations / algorithms for Design for Static Loading
- Solved examples and previous-year questions on Design for Static Loading

Unit 2: Design for Fatigue Loading

- Definition, key concepts and significance of Design for Fatigue Loading
- Important diagrams / derivations / algorithms for Design for Fatigue Loading
- Solved examples and previous-year questions on Design for Fatigue Loading

Unit 3: Shafts and Keys

- Definition, key concepts and significance of Shafts and Keys
- Important diagrams / derivations / algorithms for Shafts and Keys
- Solved examples and previous-year questions on Shafts and Keys

Unit 4: Bearings and Lubrication

- Definition, key concepts and significance of Bearings and Lubrication
- Important diagrams / derivations / algorithms for Bearings and Lubrication
- Solved examples and previous-year questions on Bearings and Lubrication

Unit 5: Springs, Clutches and Brakes

- Definition, key concepts and significance of Springs, Clutches and Brakes
- Important diagrams / derivations / algorithms for Springs, Clutches and Brakes
- Solved examples and previous-year questions on Springs, Clutches and Brakes

Exam Tips:

- * Start with the latest syllabus and exam pattern ? focus on units with the highest weightage first.
- * Solve at least 3 previous year papers under timed conditions before the exam.
- * Focus on frequently repeated topics ? they are strong preparation priorities based on available papers (not guarantees).
- * Revise definitions, diagrams and standard derivations ? they earn easy marks.
- * Practise numerical problems from every unit; papers usually include 2?3 compulsory problems.
